---

Dear EPA and RRT Members,

This is a message to Horizon since they have sent information requests to us in two different forms. Please respond. My direct number is 214 783 6992

Sincerely,  
Steven Pedigo

Dear Horizon,

The OSEI Corporation has sent you information through 2 different avenues, one avenue came with a tracking number. If you want to see OSE II in action go to our web site at [www.osei.us](http://www.osei.us), click on videos and watch the first one from ABC news. This news cast contains a live demonstration of our product OSE II on Louisiana water. This will show you we can make the oil disappear, but it is still there, just like when you apply a dispersant. The HUGE DIFFERENCE is that dispersants cause the oil to come ashore as tar balls, which requires a secondary clean up action. OSE II will have NO secondary clean up action since the oil will be digested to CO2 and water. THIS would make the state happy, this would allow the RRT to have a meaningful response that does not cause more problems than what it is addressing, and potentially you could help future drilling if you could shop the US public that you now have a safe non toxic spill response product that can mitigate the hazards from a spill.

OSE II is and has been used as a first response tool for 21 years. We are having videos of spill response in numerous ports from around the world, showing OSE II cleaning them up, to offer up more live evidence of the great non toxic alternative to dispersants. We are willing to work with you as a team player, however you need to come to the table willing to change your 20 year old response to spills that has been exposed as woefully inadequate.

You have a choice that could turn around your present PR situation, not accessing it just does not make sense. You can call me direct, and I am sure you probably have our my phone number, however here it is again, 214 783 6992 We can help, you just have to change your mind set.

Sincerely,  
Steven Pedigo
